DIY Cuts - NEW FLORA DIES

DIY Flora Pansy (DD484)

DIY Flora Peony (DD485)

DIY Flora Classic (DD486)

instructions

- Cut 3x Flora Peony die.
* Tip ; You can run 2 layers of the foam at once through your die cut machine but if you do any more than that the detail of the die gets a little squashed and it's not an nice clear cut.
- With a Baby Wipe add the Island ink to one side of the die cut flowers, just lightly brush it on.
- To create a defined center to the flowers use an Ear Bud (Q-Tip) and gently brush the Avocado Ink to the centers of the flowers also do the same with the stamen center.
- With either an iron or melting pot heat a flower for a couple of seconds and scrunch it into a very tight ball, repeat with all the layers and set aside.
- With the Stamen center roll it into a tight ball.
* Tip: If you have trouble rolling the center use a tooth pick.
- Now to construct the flower...
Flatten out your layers and start with the biggest first.
- On a Kitchen Sponge (the large thick foam ones) place a drop of hot glue in the center of your first flower, and attach the second layout in the opposite direction.
* Tip: Push the layers together with a tooth pick or ball tool and push down on the sponge it will shape your flower.
- Repeat this with all your layers, remembering to push your flower into the sponge.
- Attach the curled Stamen into the center of your flower.
- Once the glue has cooled you can give the flower a little scrunch and shape the petals in between your fingers.
* Tip; For the other flowers to shape them you heat them and use metal ball tools on the back of a mouse mat or dense thick foam to stretch from the center to the petals and this will curl the flower naturally.
*Tip; Don't forget to mix and match your flower dies to create your own unique flowers and you can add rhinestones, glitter, pearls to create a stunning center in your foam flowers.
